

INTRO TO GAME DEVELOPMENT

WEEK 08 UI & Space

UI and Canvas

All of the UI in Unity is attached to a Canvas element. Add it from the Game Object>UI menu

Adding your first UI element will auto create one for you

Tutorials to follow along:

<https://www.raywenderlich.com/114700/introduction-unity-ui-part-1>

Rect Transform

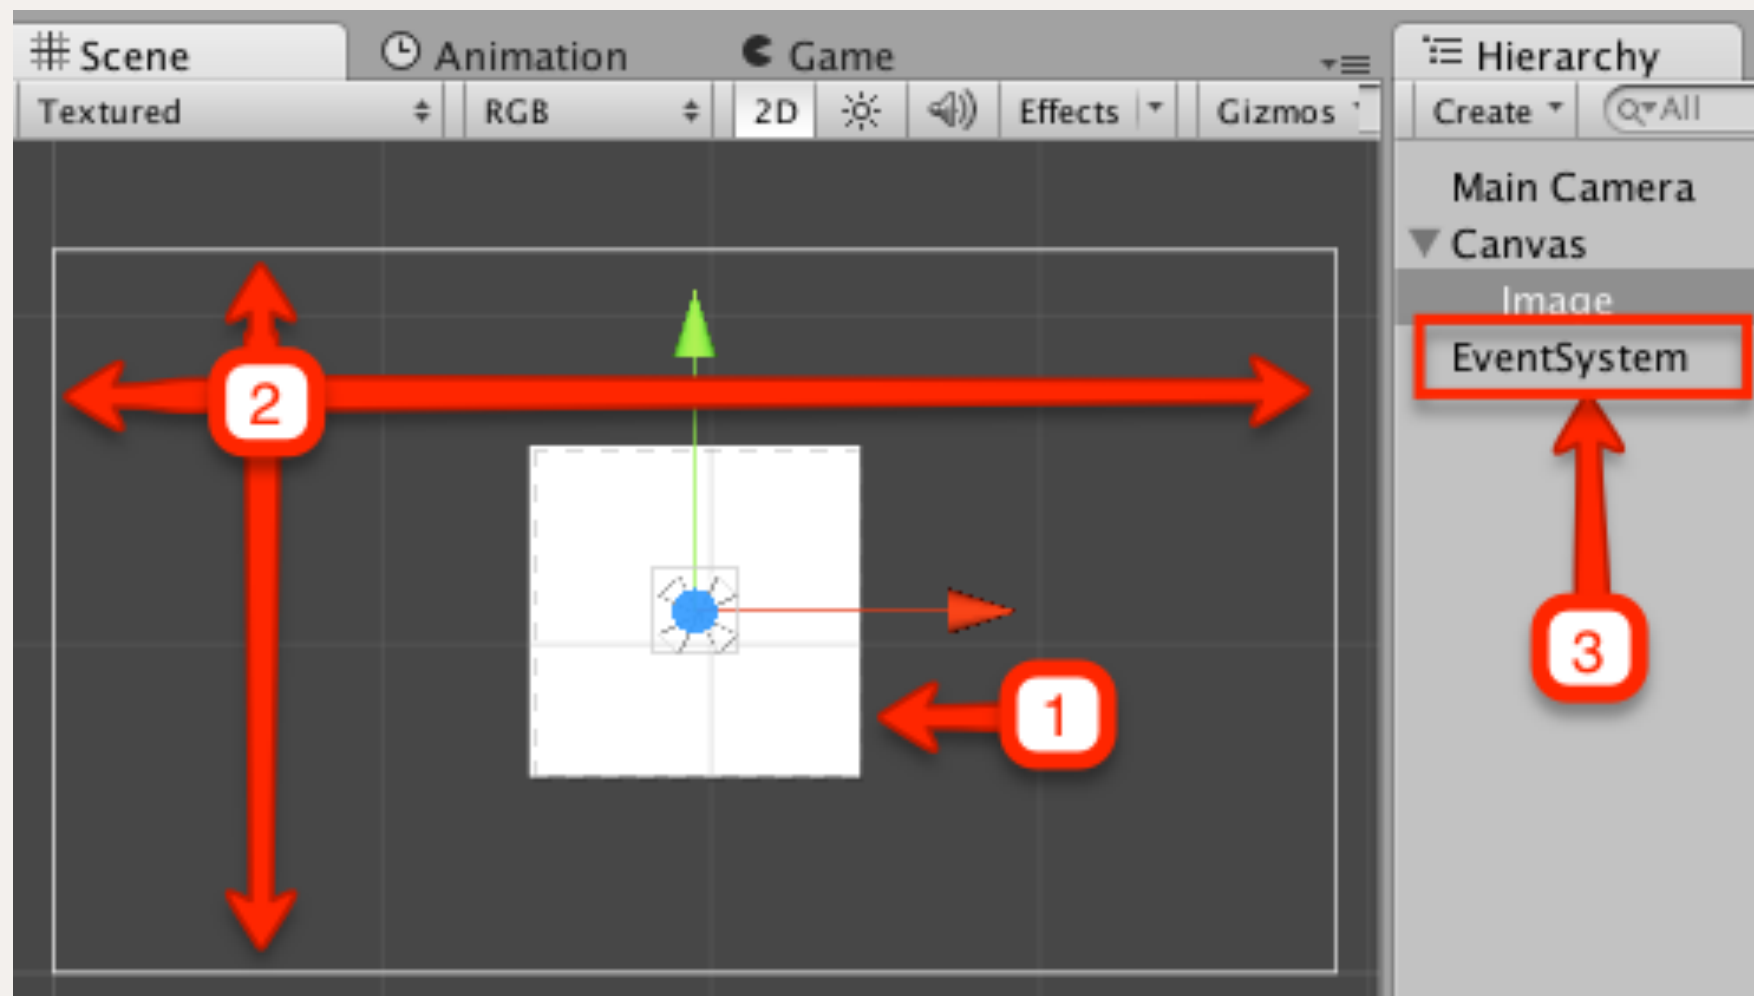

Used to position elements within your canvas

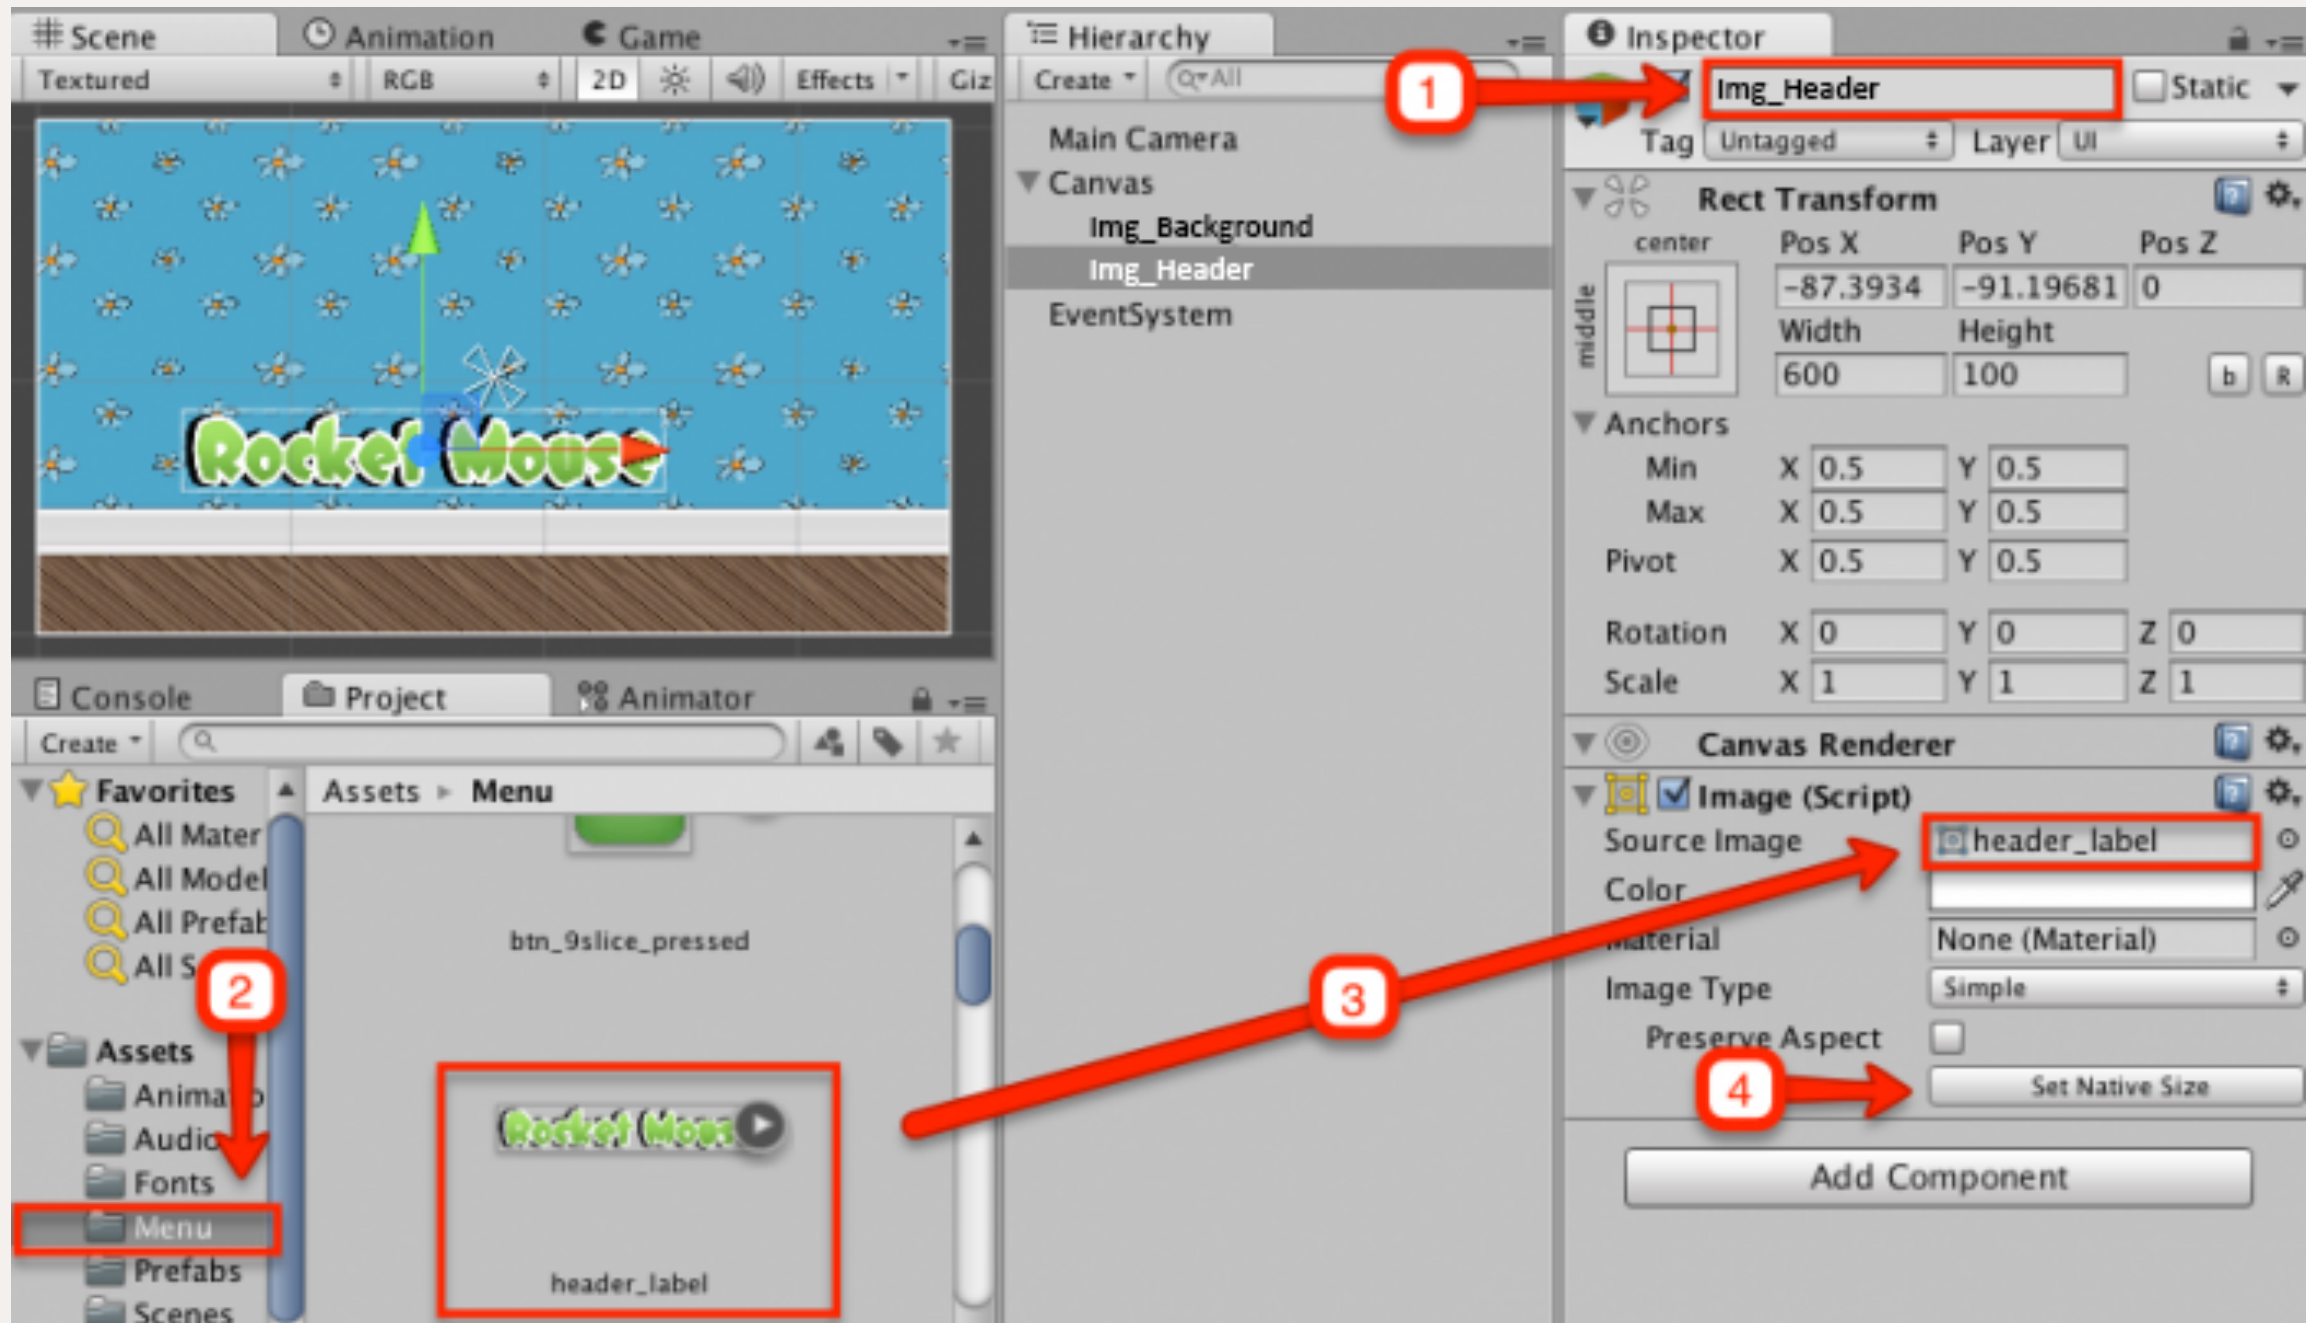

Elements in a system

Elements after adding an image to your canvas

1. Canvas 2. Image 3. Event System

Setting up an image

Anchor points

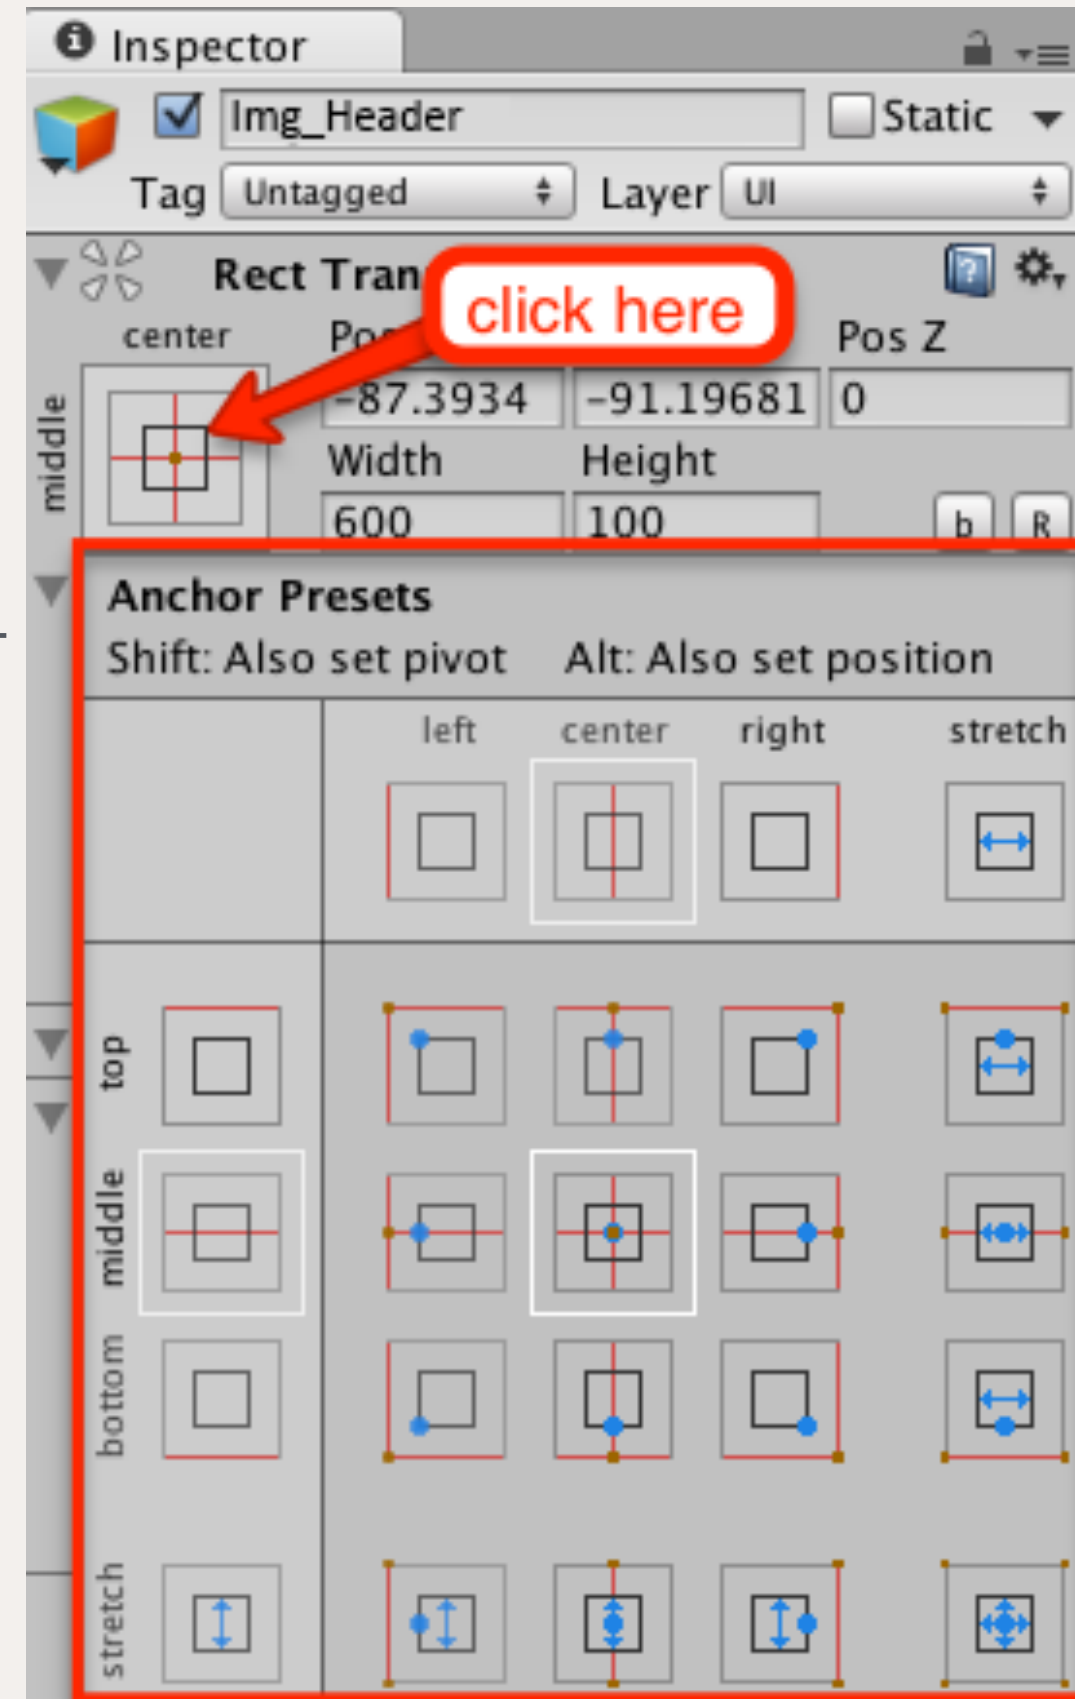

Control the anchor points for this element

Can be set to presets or custom points

Can be split to indicate a specific area of the canvas

These change the rect transform in a way that's

similar to absolutely vs relatively positioning w/HTML

Pivot

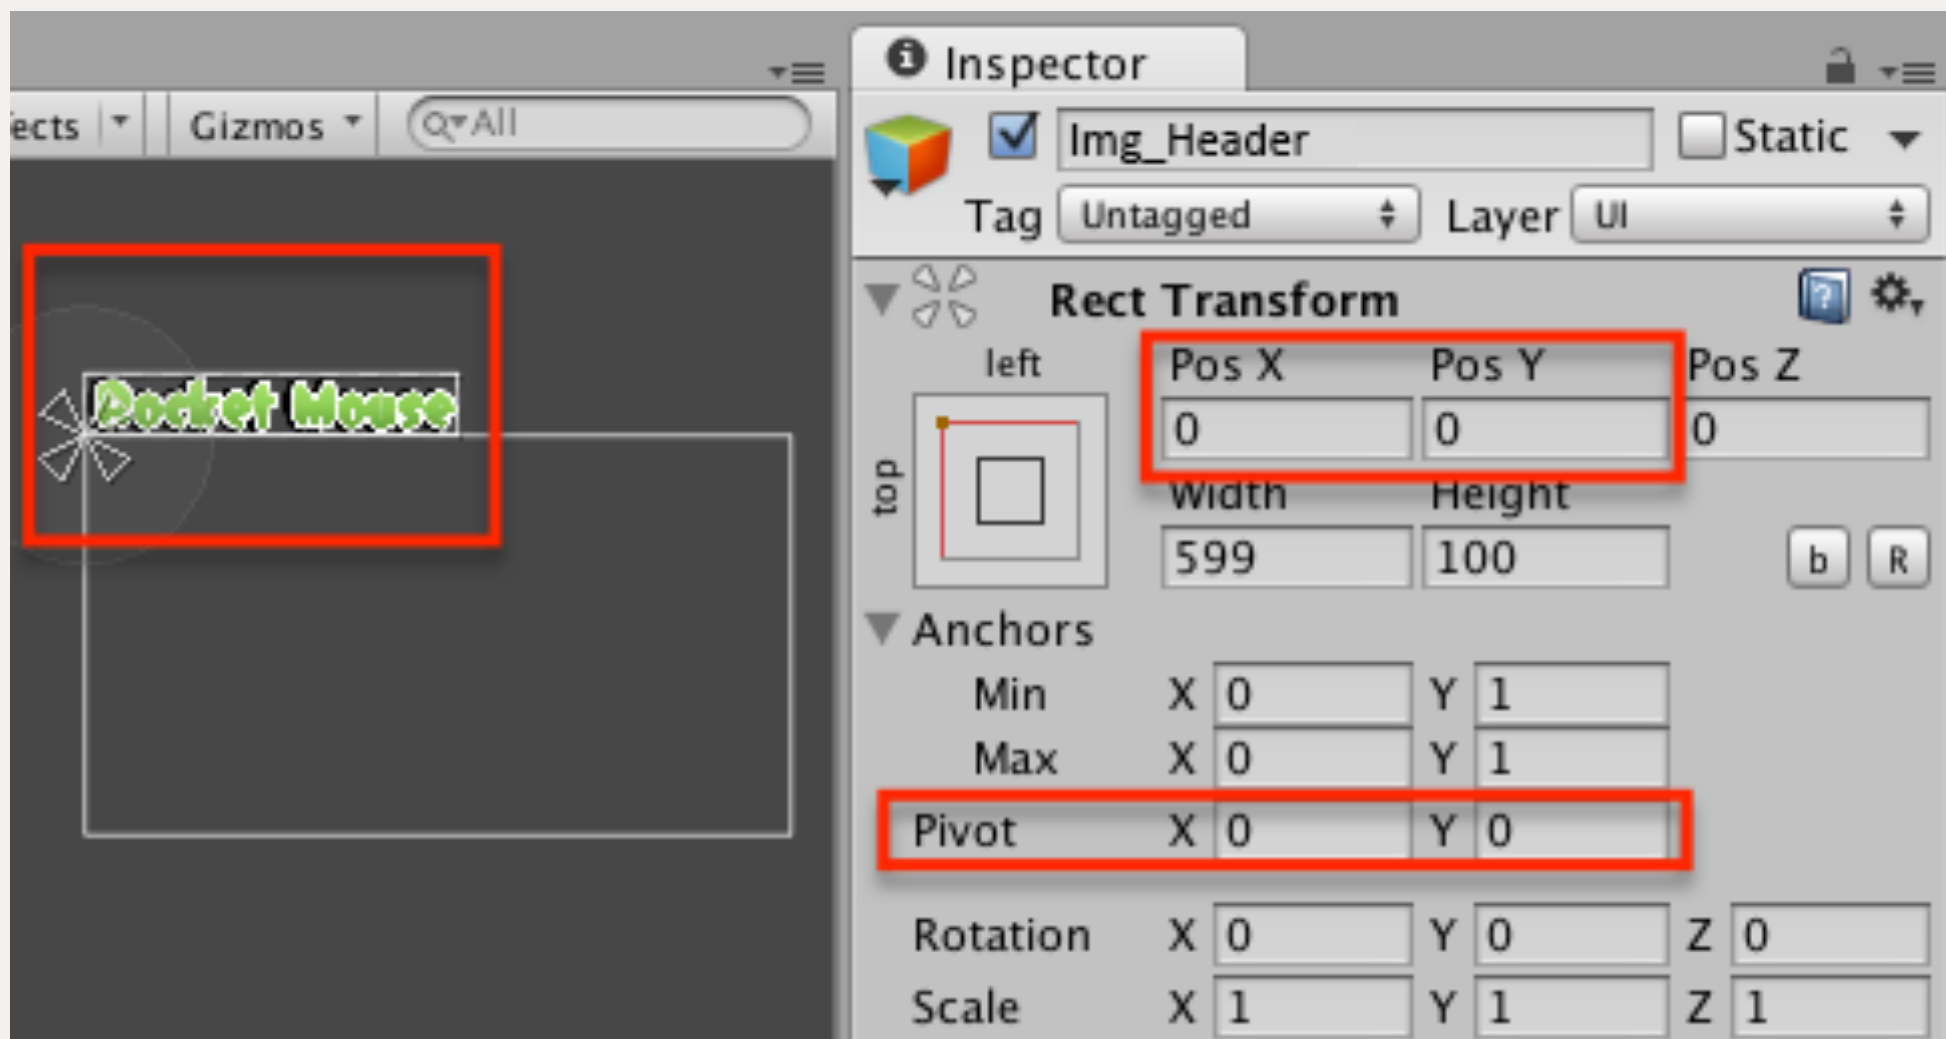

The Pivot is a point around which all transformations are made.

If you rotate your UI Element, it'll rotate around that point.

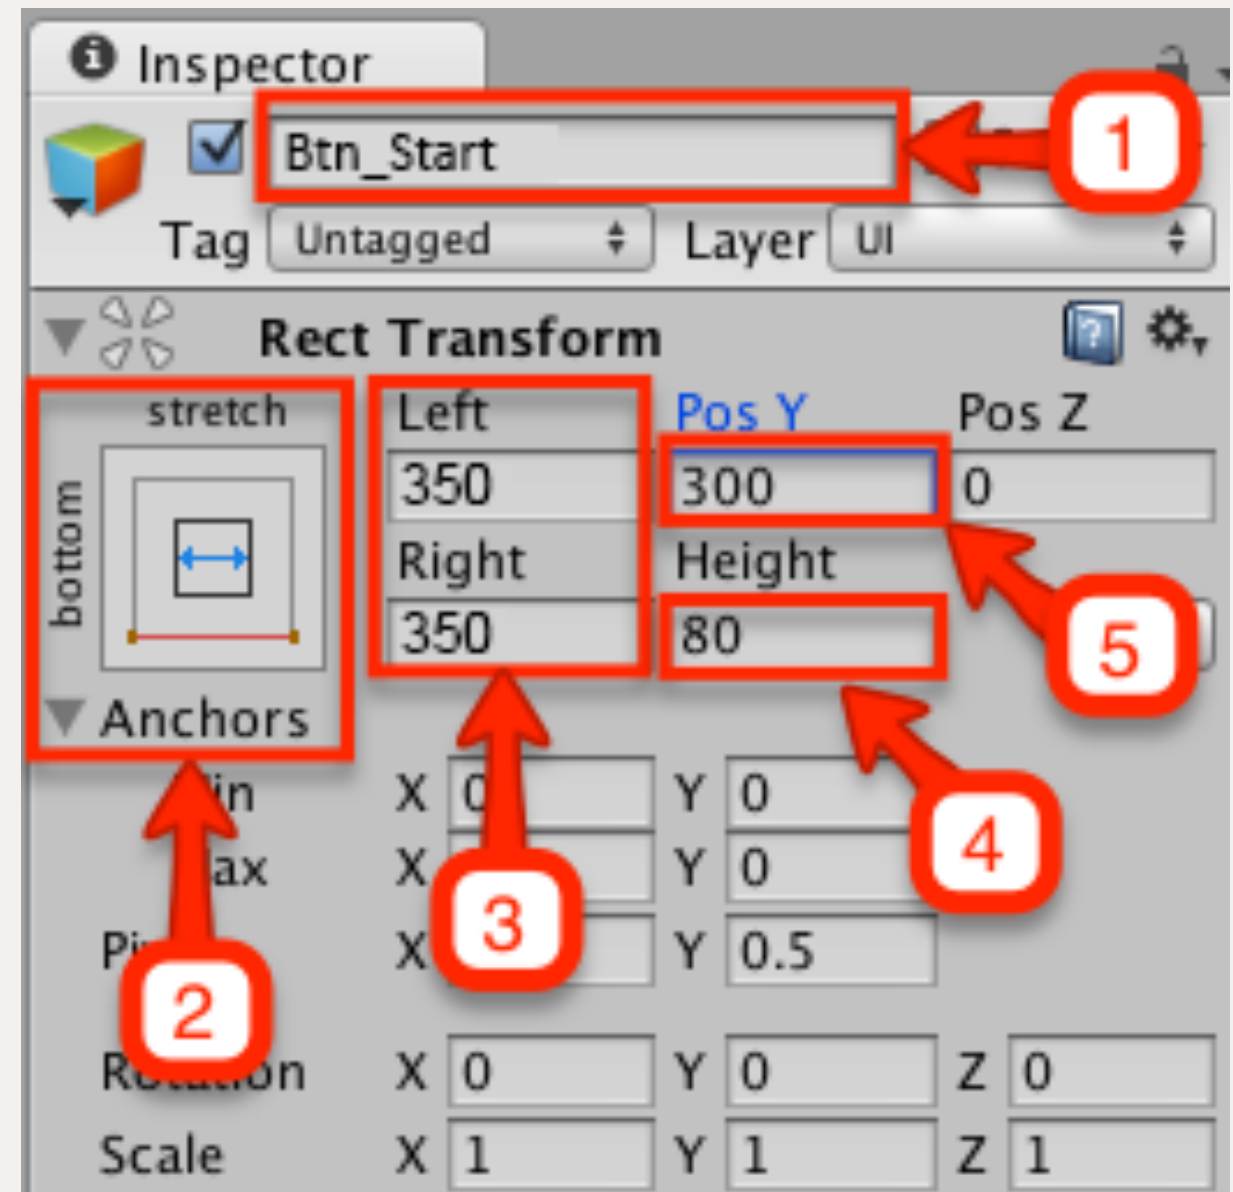

Pivot

It's important to understand that the position of a UI Element is **set relative to the Anchors**. This is why (0,0) position means the distance from Anchors, which are set to top-left corner of the Canvas.

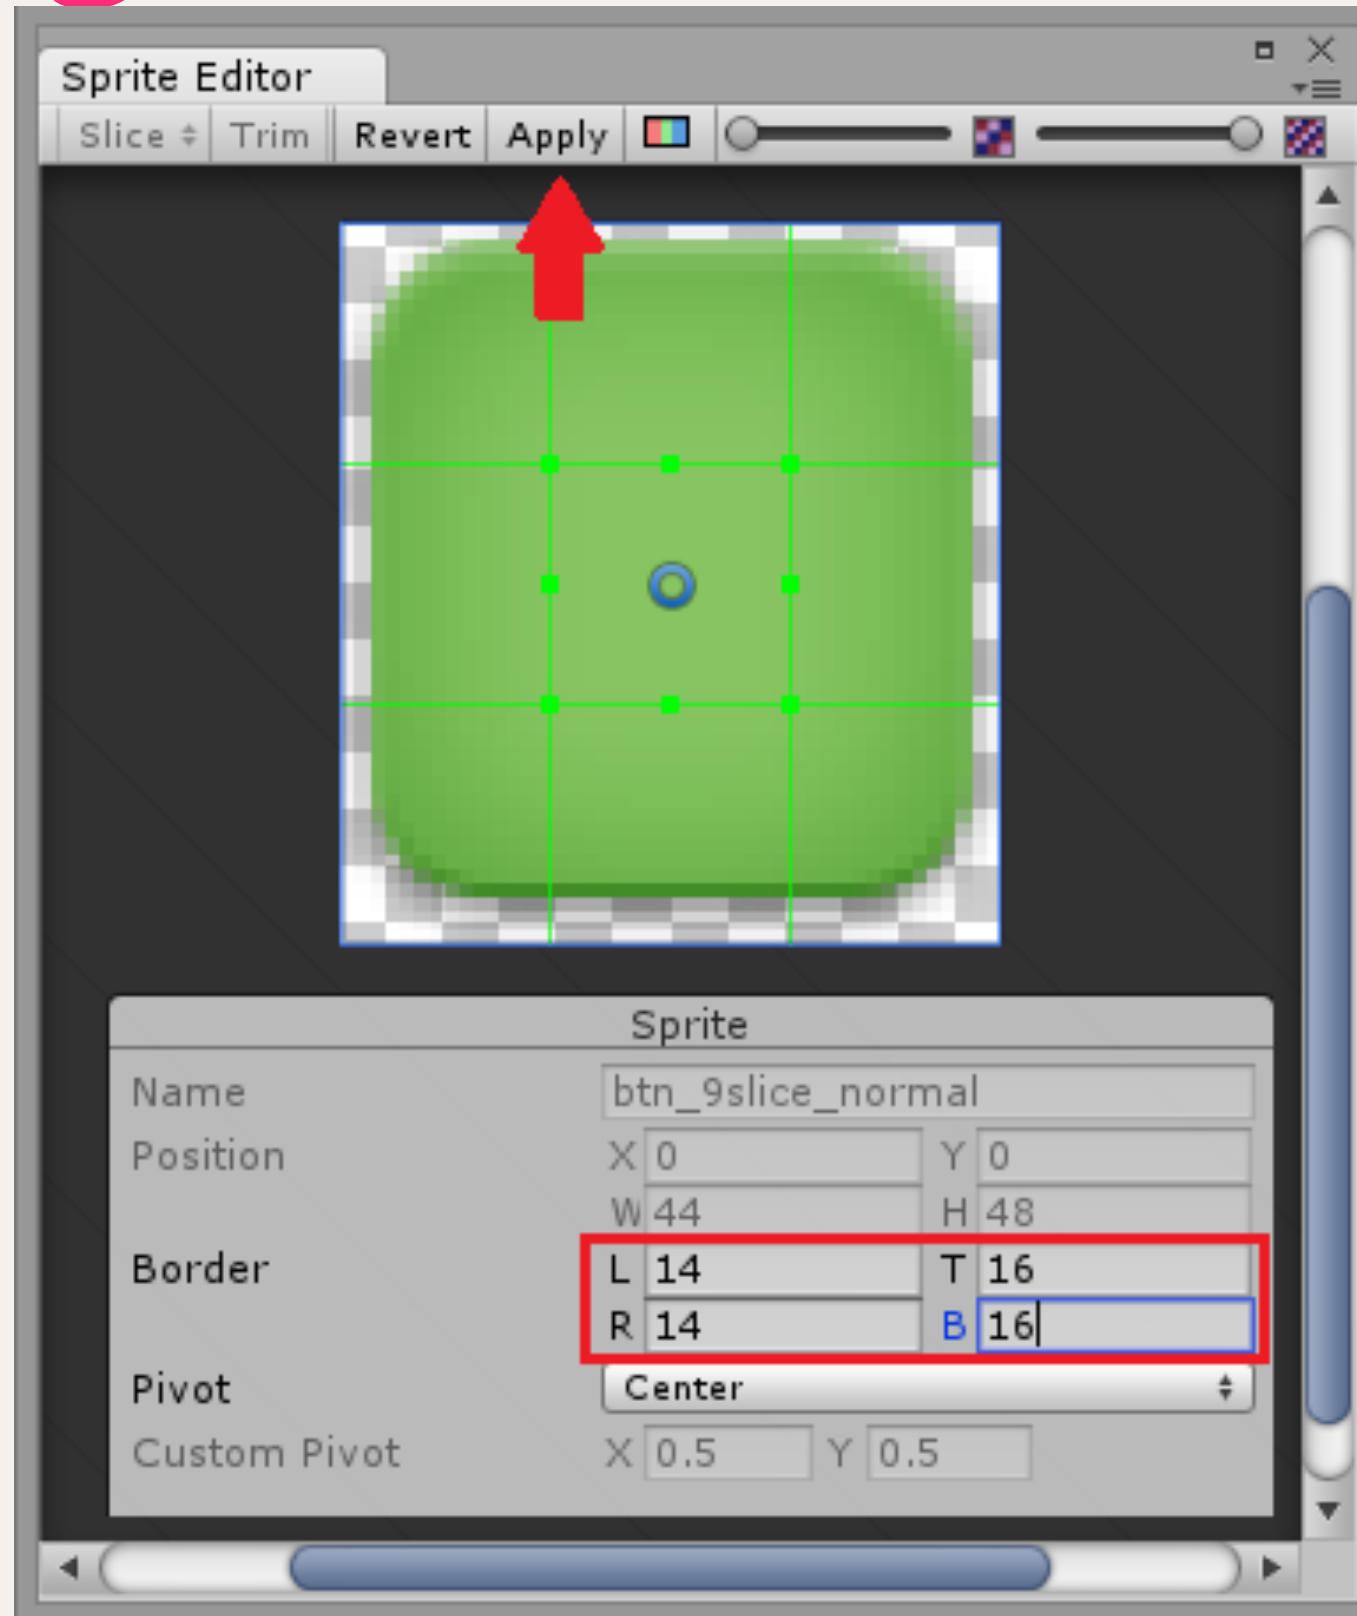

9slice

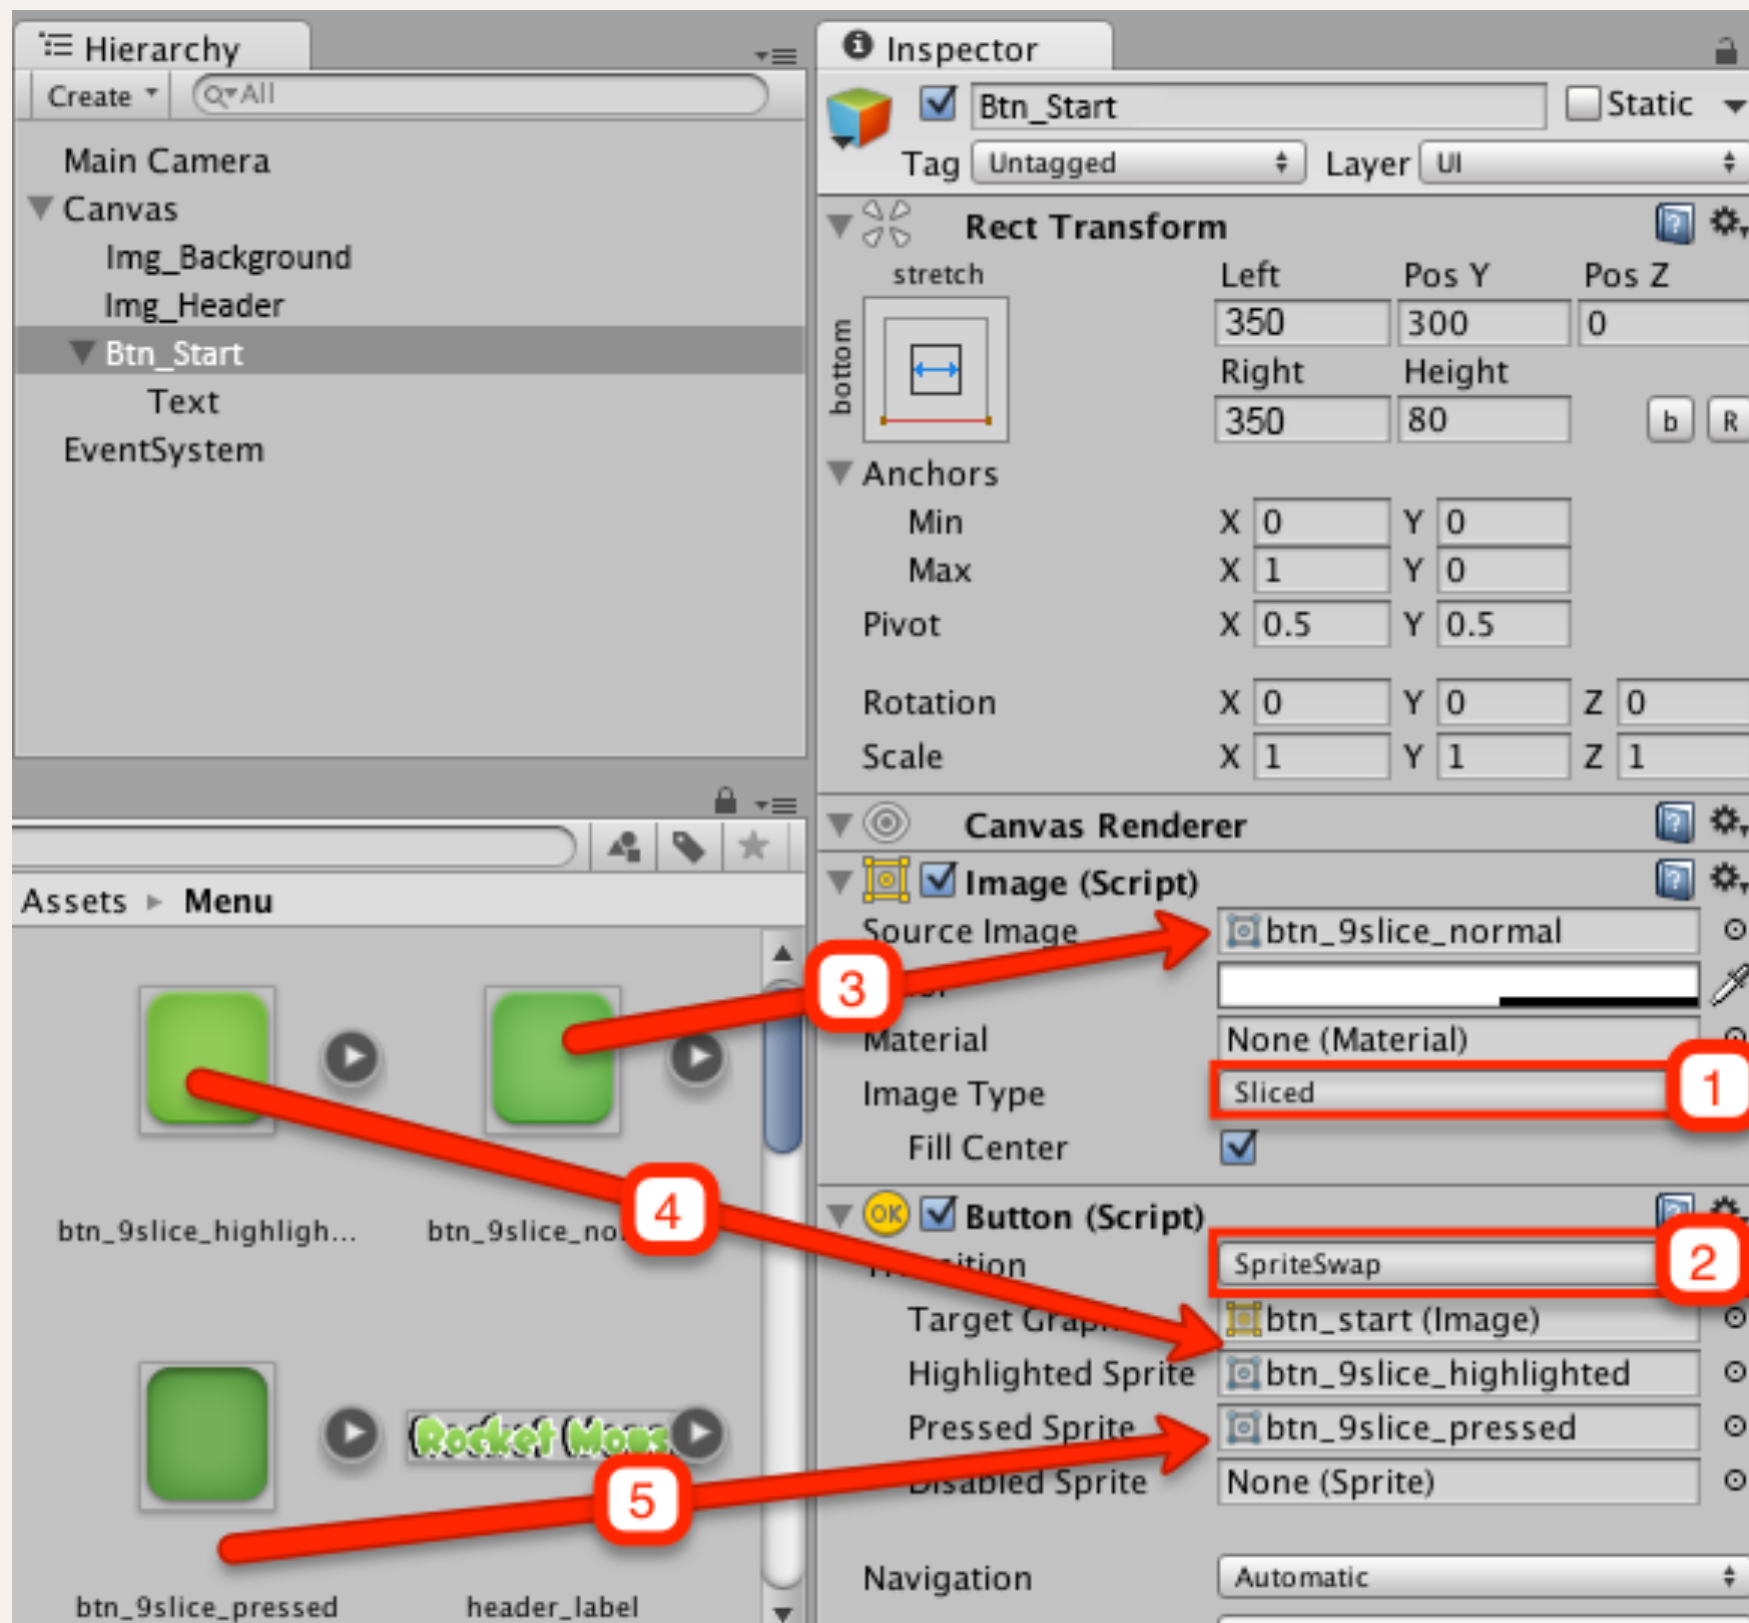

Buttons that have some sides that scale

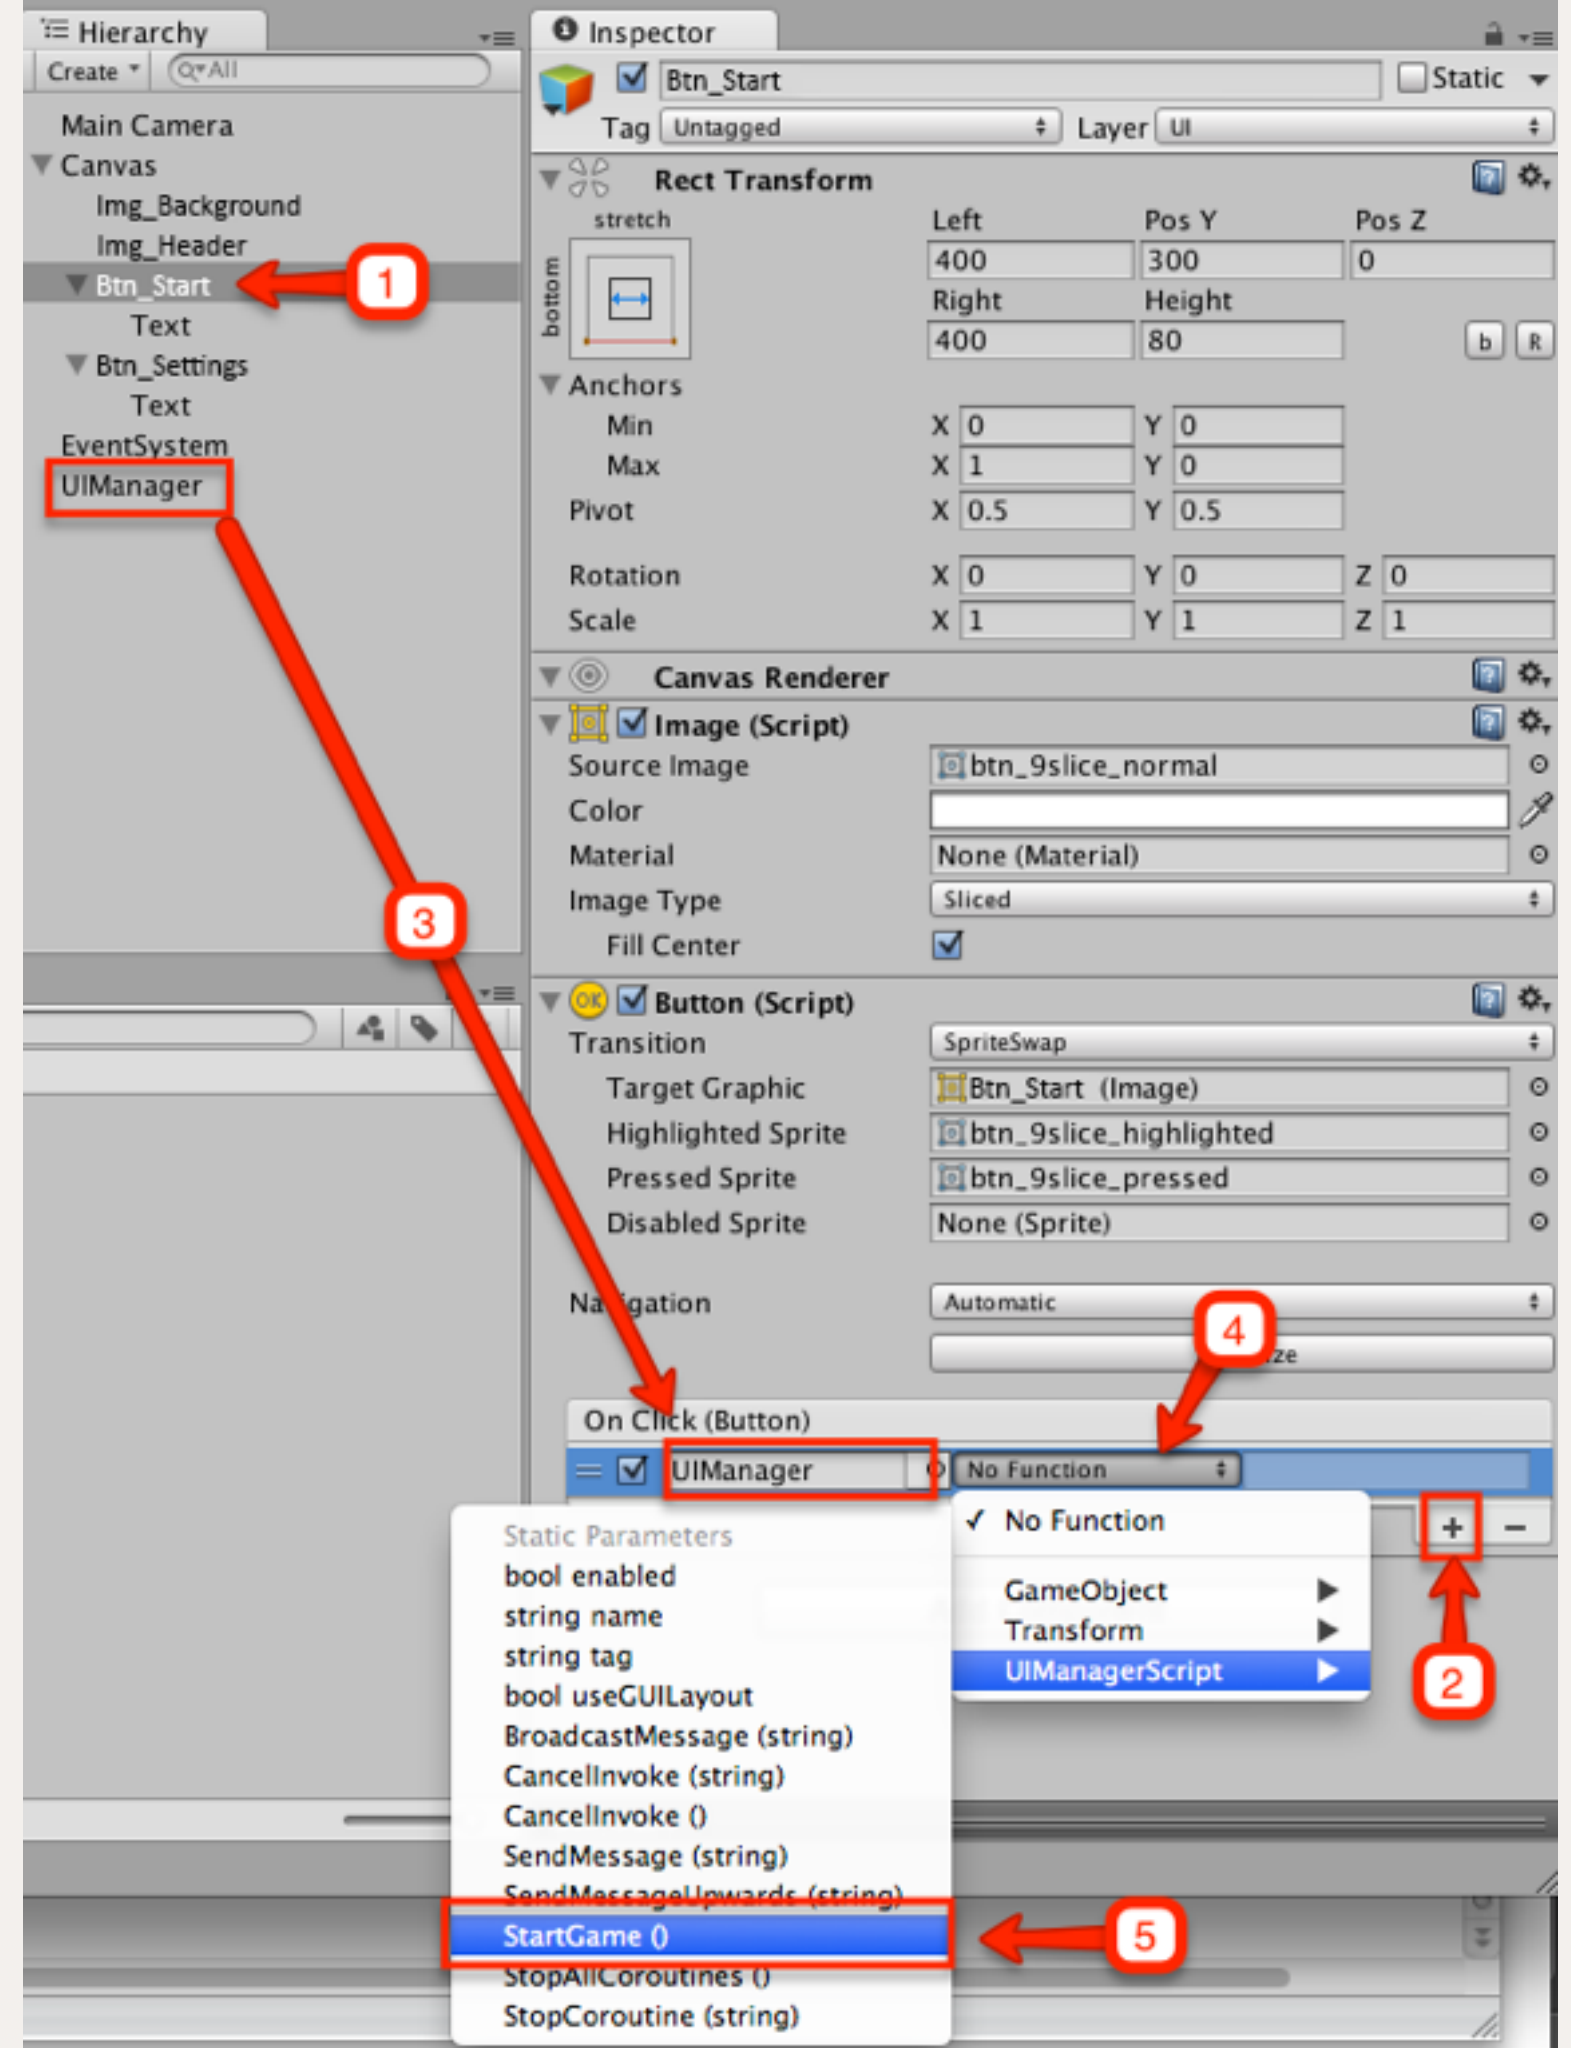

Settings for a 9 sliced btn

Setting rollover

Getting get
btw to work

World(0,0,0)
in units

Screen(0,0)

in pixels

Screen.width, Screen.height

Viewport (1,1)

in relative coordinates

Viewport (0,0)
